Systems for all Venues

Brooke offers a choice of two distinct Line Array systems, each of which can be configured into a wide variety of arrays to suit almost any venue. Typical arrays comprise one or two Subwoofers plus two, four, six or eight full range speakers or "top boxes". Designed for both indoor and outdoor use, the smaller Compact range is ideally suited to small and mid-sized venues, whilst the Stadium units provide superb sound quality for the larger venue. Pages 35 to 42 highlight the component full range "top boxes" and the subwoofers of each system in their individual detail.

Maximum Flexibility & Compatibility

Brooke Line Array systems deliver highly directional sound at live event venues, theatres and clubs alike. Brooke engineers have designed cabinets with tightly vertically focused sound, coupling the audio from multiple cabinets for maximum range or "throw". A combination of top quality materials, drivers and cabinets come together for class-leading performance and value. Each system works extremely well in conjunction with Brooke's range of audio amplifiers and digital processors found throughout this catalogue. Together with these perfect partners they deliver awesome capability and tremendous reliability - all at realistic and very affordable price points.

Fly or Floor

Adjustable mounts allow top speakers in the stack to be directed and shaped in the distinctive line array "curve", further enhancing the richly powerful sound. The innovative hardware can be flown from a variety of rigging points, or can be inverted and used "ground stacked".

The Ideal Venue Product

Many venues have struggled to justify moving up to line array in these times of competitive markets - until now. Even smaller venues can now afford superb sound quality and power delivery without breaking the bank.

These new generation Line Arrays look and perform just like some much more expensive systems, whilst maintaining profits for the operating business. The low purchase price means a swift return on investment with low impact on cash-flow.

The Complete Solution

With our UK based support team ready to help you at every step, the Brooke Line Arrays need to be seen and heard first hand to be appreciated. Contact your dealer for a one-on-one audition.

BRLA208T Line Array Speaker

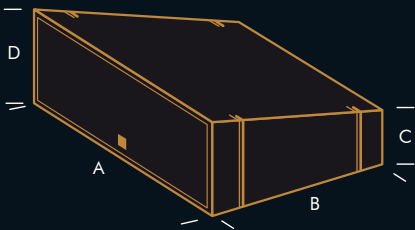

“Small Cabinet,
Big Sound”

Stadium Speakers

BRLA208T Line Array Speaker

Product Code	BRLA208T / J29408
Drivers	2 x 8" Drivers & Compression Driver
Power	250w RMS
Frequency Response	100Hz - 20KHz
SPL	98dB
Input Impedance	8Ω
Output Connector	Neutrik Speakon®
Crossover	2700Hz
Dimensions	A 720mm B 365mm C 180mm D 270mm
Weight	29.5kg

Small and Medium Venues

The Brooke BRLA208T Compact full range "top" speaker is especially suited for touring, purpose designed for top quality performance in small to mid-sized indoor and outdoor venues. Twin 8" drivers plus a centrally mounted compression driver deliver 250w at high sound pressure levels. They directly mount onto the BRLA118S bass unit with front and rear fixing pins to provide the optimum sound coverage angle.

The Complete Package

BRLA208T Compact speakers are traditionally configured in pairs of two, four, six or eight units in combination with a BRLA118S subwoofer. Supplied as a set of four in a flight case with full lift lid, they are fitted with twin fold flat handles on end faces and braked casters for ease of transport and installation. A wheeled dolly board is also supplied to ease movement of speakers into position.

Great Compatibility

Neutrik Speakon® sockets on the rear of the unit ensure compatibility with standard amplifier connections.

Stadium Speakers

Compact Line Array Subwoofers

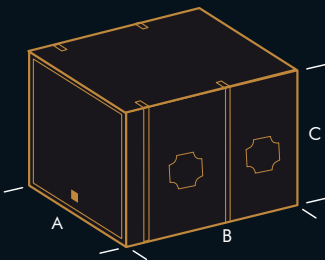

BRLA118S Line Array Subwoofer

BRLA118S Line Array Subwoofer

Product Code	BRLA118S / J29425
Drivers	1 x 18" Bass Driver
Power	500w RMS
Frequency Response	30Hz - 300Hz
SPL	98dB
Input Impedance	8 Ω
Output Connector	Neutrik Speakon [®]
Dimensions	A 736mm B 560mm C 540mm
Weight	63.5kg

Small and Medium Venues

The Brooke BRLA118S Compact bass driver unit is especially suited for touring, purpose designed for top quality performance in small to mid-sized indoor and outdoor venues. The single 18" bass driver delivers 500w. Flying brackets front and rear allow the BRLA208T Compact full range top speakers to be securely fitted underneath at the optimum sound coverage angle.

The Complete Package

BRLA118S Compact subwoofer is traditionally combined with pairs of two, four, six or eight units of the BRLA208T Compact full range top speakers. Supplied in a flight case with full lift lid, they are fitted with twin fold flat handles on end faces and braked casters, all for ease of transport and installation. A wheeled dolly board is also supplied to ease movement of speakers into position.

Industry Standard Connections

Neutrik Speakon® sockets on the rear of the unit ensure compatibility with standard amplifier connections.
