### **Two Markets**

Install 'N' Hire speakers meet and exceed the needs for both professional Fixed Installations and Audio Equipment Hire. Whilst lightweight & robust enough for the Hire market, INH Plywood cabinets offer superb audio performance and the wide range of fixing options to suit Installations especially well.

### **Flexibility & Strength**

Installation speakers need to be flexible enough to install to a wide range of surfaces, but at the same time strong enough to cope with these different fixing methods. Cabinets are fully compatible with industry standard Powerdrive™ wall or ceiling brackets, and can be easily "flown" with wires. The internal strength of the cabinets must be uncompromising both in these situations. The INH Plywood range work equally well as front-of-stage monitors or in a ground mounted floor stack. Finally, each cabinet comes complete with a 35mm top-hat on the base for use with subwoofers or tripod stands.

### **Professional Speaker Cabinets**

Speakers have to look great, but remain unobtrusive. Most installations require speakers that blend into the background using them to simply deliver high quality sound - not be the focus of attention. However, cabinets will still be visible to the public, so they must look the part.

### **Easy to Connect**

Neutrik Speakon® sockets on the rear of the units ensure compatibility with standard connections from external amplifiers.

### **Top Sound**

No matter how well speakers are made, they must deliver superb sound. These INH speakers are made from high quality plywood, rather than cheaper chipboard or MDF. Each driver is optimised for the best possible sound and efficiency then crossovers and cabinet volumes are fine-tuned to give breathtaking performance. And all this is without breaking the bank.
