Two Markets

Install 'N' Hire Subs meet and exceed the needs of both professional Fixed Installations and Audio Equipment Hire. Whilst lightweight & robust enough for the Hire market, INH Subwoofers offer superb audio performance that suits Installations especially well.

Easy to Connect

Neutrik Speakon® sockets on the rear of the units ensure compatibility with standard connections from external amplifiers.

Multiple Fixing Options

If you are using a satellite and sub combo, INH Subwoofer Systems provide rock-solid bases, top face pole support and compatibility with standard 35mm poles. Alternatively, cabinets can be stood on end for a smaller footprint without compromising performance. Don't forget that four-way ergonomic handles are designed to help you lift and position in comfort.

Professional Speaker Cabinets

Subwoofers have to look great, but remain unobtrusive. Most installations require speakers that blend into the background using them to simply deliver high quality sound - not be the focus of attention. However, cabinets will still be visible to the public, so they must look the part. Grilles are available to protect internal components or when aesthetics count, a no-grille version can be used.

Top Sound

No matter how well cabinets are made, they must deliver superb sound. All INH Subwoofer Systems are made from high quality plywood, rather than cheaper chipboard or MDF. Each driver is optimised for the best possible sound and efficiency then cabinet volumes are fine-tuned to give breathtaking performance. And all this is without breaking the bank.
