A	115mm	680mm
B	95mm	470mm
C	110mm	340mm
D	90mm	N/A
Weight	0.6kg	26kg

Flexible Choice

When you need flexibility from venue to venue, the Compact Install System offers choice for the audio professional. Using a subwoofer base unit, pairs of full range drivers can be added to suit size, acoustics and individual zones. Standard connections for signal cables and passive full range driver technology - which no additional power is required - makes retrofitting or extending an existing system particularly simple.

Unobtrusive Style

Venues often need filling with "big" sound when there isn't space for "big" full range cabinets. The Brooke Compact Install System fills that gap. A powerful subwoofer can be located well out of the way, and satellite drivers can be hidden on shelves, in corners, next to architectural fixtures and in nooks and crannies that would never hold a traditional cabinet. Quality crackle finish, metal grilles and low profile bracket mounting points ensure that what can be seen of a driver will blend elegantly with any existing decor.

A Quality Build for Quality Sound

You'd probably expect a sub to be made from plywood, but unlike lower specification products, Brooke Compact Install drivers are also made from top quality ply. The 3" units at the heart of these drivers deliver acoustic performance on a par with drivers many times their size. When installed as a full system, rich lifelike sound is generated by both subs and drivers without distortion.
